Singular Projects
2018

**Indoor Living Wall in
central DGNB office**
(Germany - Stuttgart)

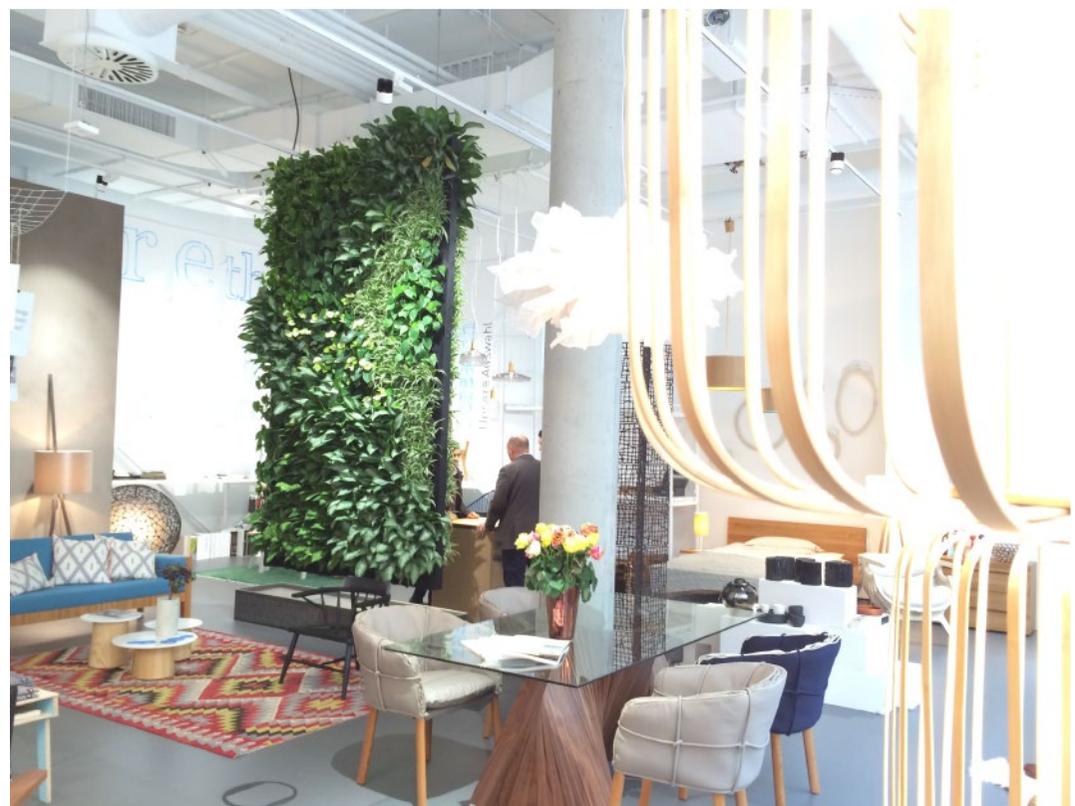

The installation of a small living wall of just 5.25 m², as a natural oasis in the center of the DGNB offices, uses the flexibility of the Fytotextile® system to adapt to a curved surface, and resolves the crossing through the interior circulations in a soft way. The design was inspired by one of the sections of Van Gogh's "Starry Night"

Indoor Living Wall InteriorPark Store (Germany - Stuttgart)

The peculiarity of this living wall, installed by our partner [Art Aqua](#) in the new shop of InteriorPark, is that the system is landscaped on both sides on a rigid panel suspended from the ceiling, which allows the garden to balance smoothly, reinforcing the lightness characteristic of the Fytotextile® system and acquiring a strong role in the interior of its new showroom.

Living Wall in Orgatec 2016 (Germany)

Art aqua stand at the Orgatec 2016 fair, showing vertical gardens mostly made with our Fytotextile® system. Presented in different uses and dispositions:

- In the living wall of the corner stand
- In the living walls in separator modules (with water tank in the base)
- In the Lianas System for vertical garden, to facilitate the construction of vertical gardens on surfaces with small radius of curvature.

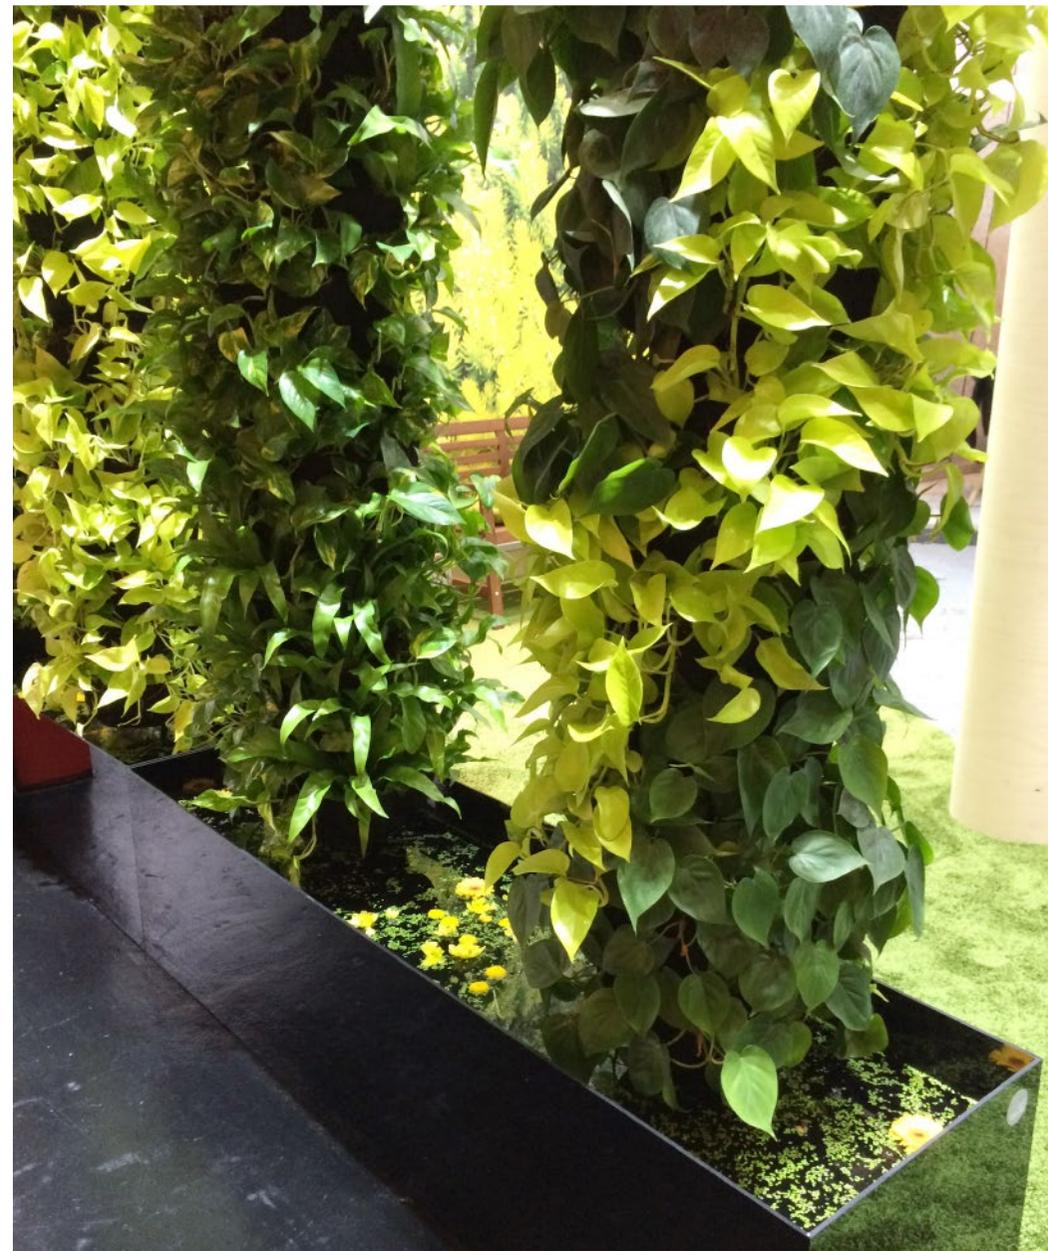

Planters, ASICS (Brussels - Belgium)

Hanging planters of small dimensions and hexagonal shape. It is solved by a Hydroponic system, developed by Terapia Urbana for our partner in England, **SCOTSCAPE** at the request of the famous sports brand ASICS. It is planned to install these planters in the main stores of Asics all around the world to show the involvement of the brand with respect for the environment

Liana System

(Germany - Stuttgart)

The "Lianas" system for vertical garden is a development for our German distributor, art aqua made by Terapia Urbana from the Fytotextile® system, to facilitate the installation of vertical gardens on surfaces of small radius of curvature. Thanks to its flexibility and lightness, with Fytotextile® lianas model it is possible to design and install vertical gardens on columns up to 8 cm in radius and surfaces with small radius of curvature.

Doors Living Walls

(Spain - Bilbao)

Ephemeral installation for the event [The white night 2017](#) in Bilbao. Fytotextile modules have been fixed on a metal framework and have been designed to adapt to surface and to simulate three large doors.

Outdoor Living wall in Plaza de Armas *(Spain - Sevilla)*

Living wall in emergency exits in public square. Combination of design and selection of plants between the living wall and the green roof to have a harmonious vision. The project has 5 exits with different orientations and hours of sun very diverse, reason why the selected species have been studied to guarantee the life of the plants throughout the year
